*October 2002*

# 1 Introduction to Modified Pages

This document is addenda to the X12N Benefit Enrollment and Maintenance Implementation Guide, originally published May 2000 as 004010X095. As a result of the post publication review process, items were identified that could be considered impediments to implementation. These items were passed to the X12N Health Care Work Group that created the original Implementation Guide for their review.

Modifications based on those comments were reflected in a draft version of the Addenda to the X12N 004010X095 Implementation Guide. Since the X12N 004010X095 Implementation Guide is named for use under the Health Insurance Portability and Accountability Act of 1996 (HIPAA), an NPRM Draft Addenda went through a Notice of Proposed Rule Making (NPRM) comment process that began on May 31, 2002. Only the modifications noted in the NPRM Draft Addenda were considered in the NPRM and X12N review processes. No changes to the Addenda were necessary based on comments received during the NPRM process and X12N's own review processes. The Addenda was approved for publication by X12N on October 10, 2002. When using the X12N Benefit Enrollment and Maintenance Implementation Guide, originally published May 2000 as 004010X095 and incorporating the changes identified in the Addenda, the value used in GS08 must be "004010X095A1".

Each of the changes made to the 004010X095 Implementation Guide has been annotated with a note in red and a line pointing to the location of the change. For convenience, the affected 004010X095 Implementation Guide page number is noted at the bottom of the page. Please note that as a result of insertion or deletion of material Addenda pages may not begin or end at the same place as the original referenced page. Because of this, Addenda pages are not page for page replacements and the original pages should be retained.

Changes in the Addenda may have caused changes to the Data Element Dictionary and the Data Element Name Index (Appendix E in the original Implementation Guide), but these changes are not identified in the Addenda. Changes in the Addenda may also have caused changes to the Examples and the EDI Transmission Examples (Section 4 in the original Implementation Guide), again these are not identified in the Addenda.

# 1 Purpose and Business Overview

## 1.1 Document Purpose

For the health care industry to achieve the potential administrative cost savings with Electronic Data Interchange (EDI), standards have been developed and need to be implemented consistently by all organizations. To facilitate a smooth transition into the EDI environment, uniform implementation is critical.

The purpose of this implementation guide is to provide standardized data requirements and content to users of Version 004010 of ANSI ASC X12.84, Benefit Enrollment and Maintenance (834). The 834 is used to transfer enrollment information from the sponsor of the insurance coverage, benefits, or policy to a payer. The intent of this implementation guide is to meet the health care industry's specific need for the initial enrollment and subsequent maintenance of individuals who are enrolled in insurance products. This implementation guide specifically addresses the enrollment and maintenance of health care products only. One or more separate guides may be developed for life, flexible spending, and retirement products.

### 1.1.1 Trading Partner Agreements

It is appropriate and prudent for payers to have trading partner agreements that go with the standard Implementation Guides. This is because there are 2 levels of scrutiny that all electronic transactions must go through.

First is standards compliance. These requirements **MUST** be completely described in the Implementation Guides for the standards, and **NOT** modified by specific trading partners.

Second is the specific processing, or adjudication, of the transactions in each trading partner's individual system. Since this will vary from site to site (e.g., payer to payer), additional documentation which gives information regarding the processing, or adjudication, will prove helpful to each site's trading partners (e.g., providers), and will simplify implementation.

It is important that these trading partner agreements **NOT**:

- Modify the definition, condition, or use of a data element or segment in the standard Implementation Guide
- Add any additional data elements or segments to this Implementation Guide
- Utilize any code or data values which are not valid in this Implementation Guide
- Change the meaning or intent of this Implementation Guide

These types of companion documents should exist solely for the purpose of clarification, and should not be required for acceptance of a transaction as valid.

## 1.1.2 HIPAA Role in Implementation Guides

The Health Insurance Portability and Accountability Act of 1996 (P.L. 104-191 - known as HIPAA) includes provisions for Administrative Simplification, which require the Secretary of Department of Health and Human Services to adopt standards to support the electronic exchange of administrative and financial health care transactions primarily between health care providers and plans. HIPAA directs the Secretary to adopt standards for transactions to enable health information to be exchanged electronically and to adopt specifications for implementing each standard.

Detailed Implementation Guides for each standard must be available at the time of the adoption of HIPAA standards so that health plans, providers, clearing-houses, and software vendors can ready their information systems and application software for compliance with the standards. Consistent usage of the standards, including loops, segments, data elements, etc., across all guides is mandatory to support the Secretary's commitment to standardization.

This Implementation Guide has been developed for use as a HIPAA Implementation Guide for Enrollment and Disenrollment in a Health Plan. Should the Secretary adopt the X12N 834 Benefit Enrollment and Maintenance transaction as an industry standard, this Implementation Guide describes the consistent industry usage called for by HIPAA. If adopted under HIPAA, the X12N 834 Benefit Enrollment and Maintenance transaction cannot be implemented except as described in this Implementation Guide.

## 1.2 Version and Release

This implementation guide is based on the October 1997 ASC X12 standards, referred to as Version 4, Release 1, Sub-release 0 (004010).

## 1.3 Business Use and Definitions

### **Sponsor**

A sponsor is the party that ultimately pays for the coverage, benefit, or product. A sponsor can be an employer, union, government agency, association, or insurance agency.

### **Payer/Insurer**

The payer is the party that pays claims and/or administers the insurance coverage, benefit, or product. A payer can be an insurance company; Health Maintenance Organization (HMO); Preferred Provider Organization (PPO); a government agency, such as Medicare or Civilian Health and Medical Program of the Uniformed Services (CHAMPUS); or another organization contracted by one of these groups.

### **Third Party Administrator (TPA)**

A sponsor may elect to contract with a Third Party Administrator (TPA) or other vendor to handle collecting insured member data if the sponsor chooses not to perform this function.

**Subscriber**

The subscriber is an individual eligible for coverage because of his or her association with a sponsor. Examples of subscribers include the following: employees; union members; and individuals covered under government programs, such as Medicare and Medicaid.

**Dependent**

A dependent is an individual who is eligible for coverage because of his or her association with a subscriber. Typically, a dependent is a member of the subscriber's family.

**Insured or Member**

An insured individual or member is a subscriber or dependent who has been enrolled for coverage under an insurance plan. Dependents of a Subscriber who have not been individually enrolled for coverage are not included in Insured or Member.

## 1.4 Batch and Real Time Transactions

Within telecommunications, there are multiple methods used for sending and receiving business transactions. Frequently, different methods involve different timings. Two methods applicable for EDI transactions are batch and real time. This implementation guide only applies to batch health care enrollment. Real time enrollment is not supported at this time.

Batch – When transactions are used in batch mode, they are typically grouped together in large quantities and processed en-masse. In a batch mode, the sender sends multiple transactions to the receiver, either directly or through a switch (clearinghouse), and does not remain connected while the receiver processes

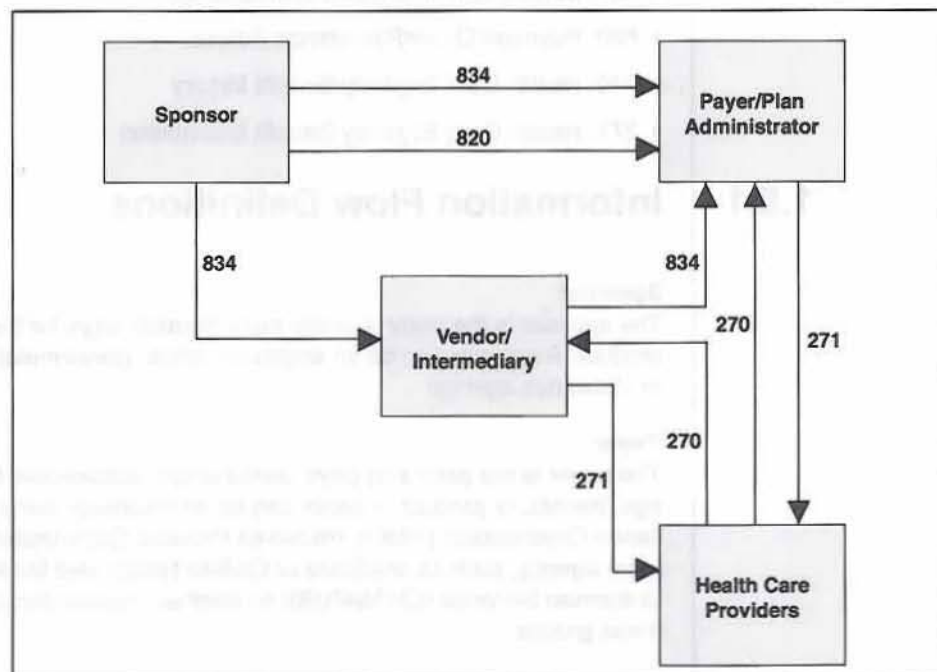

Figure 1. Health Care

the transactions. If there is an associated business response transaction (such as a 271 response to a 270 for eligibility), the receiver creates the response transaction for the sender off-line. The original sender typically reconnects at a later time (the amount of time is determined by the original receiver or switch) and picks up the response transaction. Typically, the results of a transaction that is processed in a batch mode would be completed for the next business day if it has been received by a predetermined cut off time.

**Important:** When in batch mode, the 997 Functional Acknowledgment transaction must be returned as quickly as possible to acknowledge that the receiver has or has not successfully received the batch transaction. In addition, the TA1 segment must be supported for interchange level errors (see section A.1.5.1 for details).

**Real Time –** Transactions that are used in a real time mode typically are those that require an immediate response. In a real time mode, the sender sends a request transaction to the receiver, either directly or through a switch (clearing-house), and remains connected while the receiver processes the transaction and returns a response transaction to the original sender. Typically, response times range from a few seconds to around thirty seconds, and should not exceed one minute.

**Important:** When in real time mode, the receiver must receive a response of either the response transaction, a 997 Functional Acknowledgment, or a TA1 segment (for details on the TA1 segment, see section A.1.5.1).

## 1.5 Information Flows

**Transaction sets included in the information flow diagram are as follows:**

- 834: Benefit Enrollment and Maintenance
- 820: Payment Order/Remittance Advice
- 270: Health Care Eligibility/Benefit Inquiry
- 271: Health Care Eligibility/Benefit Information

### 1.5.1 Information Flow Definitions

#### **Sponsor**

The sponsor is the party or entity that ultimately pays for the coverage, benefit, or product. A sponsor can be an employer, union, government agency, association, or insurance agency.

#### **Payer**

The payer is the party that pays claims and/or administers the insurance coverage, benefit, or product. A payer can be an insurance company; Health Maintenance Organization (HMO); Preferred Provider Organization (PPO); a government agency, such as Medicare or Civilian Health and Medical Program of the Uniformed Services (CHAMPUS); or another organization contracted by one of these groups.

#### **Plan Administrator**

The plan administrator is the entity that administers a benefit plan and determines the amount to be paid on a claim but does not actually make the payment.

#### **Health Care Providers**

Health care providers are individuals and organizations that provide health care services. Health care providers can include physicians, hospitals, clinics, pharmacies, and long-term care facilities. The legal definition of health care provider is included in section 262, Administrative Simplification, of the Health Insurance Portability and Accountability Act of 1996.

#### **Vendors/Intermediaries**

Vendors and intermediaries are organizations that distribute information about eligibility for specific benefits, but they do not actually administer the plan or make payments.

## 2 Data Overview

### 2.1 Overall Data Architecture

**NOTE**

See Appendix A, ASC X12 Nomenclature, for a review of transaction set structure, including descriptions of segments, data elements, levels, and loops.

### 2.2 Location of Product Identifiers

The 834 allows three locations for insurance product identifiers, such as policy numbers and group numbers:

- A situational REF segment at the transmission level
- A situational REF segment at the insured individual level
- A situational REF segment at the health insurance product level

**NOTE**

See Appendix A, ASC X12 Nomenclature, to review the transaction set structure, including descriptions of segments, data elements, levels, and loops.

The work group found that there was no consistent use for the insurance product identifier at the transaction set level. The 834 makes the occurrence situational, the work group selected code "38", Master Policy Number, for this occurrence. The REF02 element should not be sent if a policy number does not apply to the entire transaction.

Most identifiers should be communicated at the insured level. At this level, code 'OF' identifies the insurance policy. With this code, a single occurrence of the REF segment at this level is situational. The policy number should be passed in this occurrence of the REF if the HD segment is not passed or if all applicable coverage in the HD segment is covered under a single policy number. Other codes are included in optional occurrences of the REF segment to support business needs under the specific policy. The developers of this implementation guide were not able to limit the sender to a single code because of the variety of different insurance plans.

At the insurance product level, the sender also has the option of sending the policy number. This could apply if different policy numbers exist for a particular insurance product specified in the HD segments and a policy number is not passed at the insurance level REF segment.

### 2.3 Date Terminology

Users of past 834 implementation guides encountered considerable confusion about what codes should be used for dates related to the insured in Loop ID-2000 and to the insurance coverage in Loop ID-2400. This confusion resulted because several codes with very similar uses were available. These codes include the following: effective date, eligibility date, enrollment date, plan date, coverage date, and benefit date.

The tendency has been to try to use the same terminology as that used in the application systems. Lengthy discussion was required to reach a resolution be-

cause the application systems' terminology often differed among different systems. To facilitate communications between different systems, the developers of this implementation guide have limited the codes in Loop ID-2300 DTP, with the term "benefit" being used for actual dates of coverage. The developers recommend that these codes be used regardless of the names used in the sender and receiver systems.

Many more codes are listed in the DTP segment in Loop ID-2000. The developers of this implementation guide recommend that the term "eligibility" be used to refer to the dates on which an insured individual may choose to be covered.

## 2.4 Linking a Dependent to a Subscriber

Subscribers and dependents are sent as separate occurrences of Loop ID-2000. The initial enrollment for the subscriber must be sent before sending the initial enrollment for any of the subscriber's dependents. The enrollment of a dependent may follow the subscriber's enrollment in the same transmission, or it may be sent separately in a later transmission. Maintaining the existing enrollments of a subscriber and dependents can occur in any sequence.

Payers use various means to link dependents to the subscriber. The most common method is to use the subscriber's Social Security Number (SSN). To allow linking between subscribers and dependents without making assumptions about the receiving system, use the code "0F," Subscriber Number, in the REF segment, Loop ID-2000, position 020. The subscriber's unique identifier is sent in this segment in both the subscriber's and the dependent's Loop ID-2000.

The individual's SSN is sent and identified as such in NM108, Loop ID-2000, position 030. This applies to both subscribers and dependents. If the SSN is used for linking, then the subscriber's SSN is sent in both locations on the subscriber's Loop ID-2000.

## 2.5 Termination

In developing this implementation guide, the work group had extensive discussions on what data should be sent to terminate coverage for a subscriber's family. The two options are to send the minimum necessary data or to send complete data on the family's coverage. Although there would be benefits to the sponsor in maintaining complete information on each subscriber's coverage and dependents, the current practice includes many sponsors with less than complete data. To accommodate the greatest possible number of users, this implementation guide will be based on passing only the minimum necessary data. The following options will allow the receiver to determine the correct action to take for each possible notification of termination.

If the termination date is passed at the INS level for a subscriber; the DTP segment in position 040, loop 2000; then all coverage for that subscriber and for all dependents linked to that subscriber will be terminated, effective on that date.

If the termination date is passed at the INS level for a dependent; the DTP segment in position 040, loop 2000; then all coverage for that dependent will be terminated, effective on that date. The coverage for the subscriber and any other dependents will not be affected.

If the termination date is passed at the HD level for any member; the DTP segment in position 270, loop 2300; then coverage for that specific insurance product for that member will be terminated, effective on that date. Coverage for other insurance products for that member will not be affected nor will coverage for other members linked to the same subscriber.

Termination dates are not to be sent at both the HD and the INS levels for a particular occurrence of loop 2000.

Terminating all covered insurance products for a dependent at the HD level is the equivalent of terminating that dependent at the INS level. Terminating all insurance products for a subscriber at the HD level is different, in that there may be dependents that continue to be covered, i.e. - dependent only plans. A subscriber with all insurance product coverages terminated will be terminated as a member only if there are no dependents linked to that subscriber.

In the case of a transfer from one coverage to another, it is necessary to terminate the old coverage and then add the new coverage. An add to a new coverage must never be assumed to result in the automatic termination of the prior coverage.

## 2.6 Updates Versus Full File Audits

The 834 transaction can be used to provide either updates to the enrollment database or full file audits.

An update is either an "add", "terminate" or "change" request. The transaction only contains information about the changed members. This is identified in BGN08 by a code value of '2', Change (Update).

A full file audit lists all current members, whether involved in a change or not. This facilitates keeping the sponsor's and payer's systems in sync. This is not intended to contain a history of all previous enrollments. This type of transaction is identified by a BGN08 code value of '4', Verify.

The most efficient and preferred method for regular maintenance of enrollment files is to use 'Change (Update)' transactions. Periodic audit files can be used to verify synchronization.

When required by sponsor's system limitations, full replacement files can be used to report all enrollees. Because this model is more costly and requires more resources to process, it is not recommended. 'Verify' should not be used for regular, daily, processing. It is recommended that this be used no more frequently than monthly.

## 2.7 Coverage Levels and Dependents

Differences exist in how Payers handle dependents. Some Payers identify a coverage level (HD05) for the subscriber which defines the coverage for eligible dependents as well. Other Payers need detailed information on each dependent in order to maintain their databases. Still other Payers require both types of information.

The contract between the Payer and the Sponsor must identify the member reporting requirements for the Enrollment transaction.

If the termination date is passed at the HD level for any member; the DTP segment in position 270, loop 2300; then coverage for that specific insurance product for that member will be terminated, effective on that date. Coverage for other insurance products for that member will not be affected nor will coverage for other members linked to the same subscriber.

Termination dates are not to be sent at both the HD and the INS levels for a particular occurrence of loop 2000.

Terminating all covered insurance products for a dependent at the HD level is the equivalent of terminating that dependent at the INS level. Terminating all insurance products for a subscriber at the HD level is different, in that there may be dependents that continue to be covered, i.e. - dependent only plans. A subscriber with all insurance product coverages terminated will be terminated as a member only if there are no dependents linked to that subscriber.

In the case of a transfer from one coverage to another, it is necessary to terminate the old coverage and then add the new coverage. An add to a new coverage must never be assumed to result in the automatic termination of the prior coverage.

## 2.6 Updates Versus Full File Audits

The 834 transaction can be used to provide either updates to the enrollment database or full file audits.

An update is either an "add", "terminate" or "change" request. The transaction only contains information about the changed members. This is identified in BGN08 by a code value of '2', Change (Update).

A full file audit lists all current members, whether involved in a change or not. This facilitates keeping the sponsor's and payer's systems in sync. This is not intended to contain a history of all previous enrollments. The full file audit is intended to identify all active members, at a given point in time and may or may not include terminated members based on your Trading Partner Agreement. This type of transaction is identified by a BGN08 code value of '4', Verify. Any response back to the sponsor from the received transactions are outside the scope of the 834 and are the responsibility of the sponsor and payer.

The most efficient and preferred method for regular maintenance of enrollment files is to use 'Change (Update)' transactions. Periodic audit files can be used to verify synchronization.

When required by sponsor's system limitations, full replacement files can be used to report all enrollees. Because this model is more costly and requires more resources to process, it is not recommended. 'Verify' should not be used for regular, daily, processing. It is recommended that this be used no more frequently than monthly.

## 2.7 Coverage Levels and Dependents

Differences exist in how Payers handle dependents. Some Payers identify a coverage level (HD05) for the subscriber which defines the coverage for eligible dependents as well. Other Payers need detailed information on each dependent in order to maintain their databases. Still other Payers require both types of information.

Paragraph  
revised

Full file  
uses  
full file  
audits

When the contract requires the Coverage Level code and no dependent information, HD05 is **REQUIRED** for all initial enrollment or changes to the Coverage Level Code.

When Dependent information is required without the Coverage Level Codes, separate INS loops are **REQUIRED** for enrollment or change for each dependent. See the Termination section for more information. HD05 is **NOT USED** for any member.

When the dependent information and Coverage Level Code are **REQUIRED**, the Coverage Level Code (HD05) must be used for all subscriber initial enrollment or when the Subscriber's Coverage Level Code changes. This change applies to all covered dependents of the subscriber. The Coverage Level Code is **NOT USED** with dependent enrollment, changes or terminations. Note: If a dependent addition or termination effectively changes the Coverage Level Code of a subscriber, the subscriber must be changed directly if the contract requires use of the Coverage Level Code.

## 3 Transaction Sets

### **NOTE**

See Appendix A, ASC X12 Nomenclature, for a review of transaction set structure including descriptions of segments, data elements, levels, and loops.

### 3.1 Presentation Examples

The ASC X12 standards are generic. For example, multiple trading communities use the same Administrative Communications Contact Segment (PER) to specify contact names and phone numbers. Each community decides which elements to use and which code values in those elements apply to its business needs. This implementation guide, like all ASC X12N implementation guides, uses a format that depicts both the generalized standard and the trading community-specific implementation.

The transaction set detail is comprised of two main sections with subsections within the main sections.

#### Transaction Set Listing

ELEMENT SUMMARY				
USAGE	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REQUIRED	N101	98	<b>Entity Identifier Code</b> Code identifying an organizational entity, a physical location, property or an individual	M ID 2/3
SITUATIONAL	N102	93	<b>Name</b> Free-form name	X AN 1/60
SITUATIONAL	N103	66	<b>Identification Code Qualifier</b> Code designating the system/method of code structure used for Identification Code (67)	X ID 1/2
SITUATIONAL	N104	67	<b>Identification Code</b> Code identifying a party or other code	X AN 2/20
<p>X12 Syntax Note</p> <p>X12 Comment</p> <p>SYNTAX: R0203</p> <p>ADVISORY: Under most circumstances, this element is expected to be sent.</p> <p>COMMENT: This segment, used alone, provides the most efficient method of providing organizational identification. To obtain this efficiency the "ID Code" (N104) must provide a key to the table maintained by the transaction processing party.</p>				

Figure 7. Segment Key — Element Summary

#### Industry Usages:

- Required** This item must be used to be compliant with this implementation guide.
- Not Used** This item should not be used when complying with this implementation guide.
- Situational** The use of this item varies, depending on data content and business context. The defining rule is generally documented in a syntax or usage note attached to the item.\* The item should be used whenever the situation defined in the note is true; otherwise, the item should not be used.

**\* NOTE**

If no rule appears in the notes, the item should be sent if the data is available to the sender.

#### Loop Usages:

Loop usage within ASC X12 transactions and their implementation guides can be confusing. Care must be used to read the loop requirements in terms of the context or location within the transaction. The usage designator of a loop's beginning segment indicates the usage of the loop. Segments within a loop cannot be sent without the beginning segment of that loop.

If the first segment is Required, the loop must occur at least once unless it is nested in a loop that is not being used. A note on the Required first segment of a nested loop will indicate dependency on the higher level loop.

If the first segment is Situational, there will be a Segment Note addressing use of the loop. Any required segments in loops beginning with a Situational segment only occur when the loop is used. Similarly, nested loops only occur when the higher level loop is used.

## STANDARD

# 834 Benefit Enrollment and Maintenance

Functional Group ID: **BE**

This Draft Standard for Trial Use contains the format and establishes the data contents of the Benefit Enrollment and Maintenance Transaction Set (834) for use within the context of an Electronic Data Interchange (EDI) environment. This transaction set can be used to establish communication between the sponsor of the insurance product and the payer. Such transaction(s) may or may not take place through a third party administrator (TPA).

For the purpose of this standard, the sponsor is the party or entity that ultimately pays for the coverage, benefit or product. A sponsor can be an employer, union, government agency, association, or insurance agency.

The payer refers to an entity that pays claims, administers the insurance product or benefit, or both. A payer can be an insurance company, health maintenance organization (HMO), preferred provider organization (PPO), government agency (Medicare, Medicaid, Champus, etc.), or an entity that may be contracted by one of these former groups.

For the purpose of the 834 transaction set, a third party administrator (TPA) can be contracted by a sponsor to handle data gathering from those covered by the sponsor if the sponsor does not elect to perform this function itself.

**NOTES:**

- 1/050** The AMT segment is used to record the total Flexible Spending Account contributions in the transaction set.
- 1/060** The QTY segment is used to record the total number of subscribers and dependents in the transaction set.
- 1/070** At least one iteration of the N1 loop is required to identify the sender or receiver.
- 2/010** A Subscriber is a person who elects the benefits and is affiliated with the employer or the insurer. A Dependent is a person who is affiliated with the subscriber, such as a spouse, child, etc., and is therefore entitled to benefits. Subscriber information must come before dependent information. The INS segment is used to note if information being submitted is subscriber information or dependent information.
- 2/020** The REF segment is required to link the dependent(s) to the subscriber.
- 2/200** The DSB loop may only appear for the Subscriber.
- 2/310** The LX loop contains information about the primary care providers for the subscriber or the dependent, and about the beneficiaries of any employer-sponsored life insurance for the subscriber.
- 2/320** Either NM1 or N1 will be included depending on whether an individual or organization is being specified.
- 2/550** The FSA loop may only appear for the Subscriber.

## IMPLEMENTATION

## TRANSACTION SET HEADER

Usage: REQUIRED

Repeat: 1

Example: ST\*834\*0001~

## STANDARD

## ST Transaction Set Header

Level: Header

Position: 010

Loop: \_\_\_\_\_

Requirement: Mandatory

Max Use: 1

Purpose: To indicate the start of a transaction set and to assign a control number

## DIAGRAM

## ELEMENT SUMMARY

USAGE	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REQUIRED	ST01	143	Transaction Set Identifier Code Code uniquely identifying a Transaction Set	M ID 3/3
SEMANTIC: The transaction set identifier (ST01) used by the translation routines of the interchange partners to select the appropriate transaction set definition (e.g., 810 selects the Invoice Transaction Set).				
			CODE	DEFINITION
			834	Benefit Enrollment and Maintenance REQUIRED
REQUIRED	ST02	329	Transaction Set Control Number Identifying control number that must be unique within the transaction set functional group assigned by the originator for a transaction set	M AN 4/9
The transaction set control numbers in ST02 and SE02 must be identical. This unique number also aids in error resolution research. For example, start with the number 0001 and increment from there. This number must be unique within a specific group and interchange, but the number can repeat in other groups and interchanges.				

## IMPLEMENTATION

## BEGINNING SEGMENT

Usage: REQUIRED

Repeat: 1

Example: BGN\*00\*11227\*19970920\*1200\*ES\*\*\*2~

## STANDARD

## BGN Beginning Segment

Level: Header

Position: 020

Loop: \_\_\_\_\_

Requirement: Mandatory

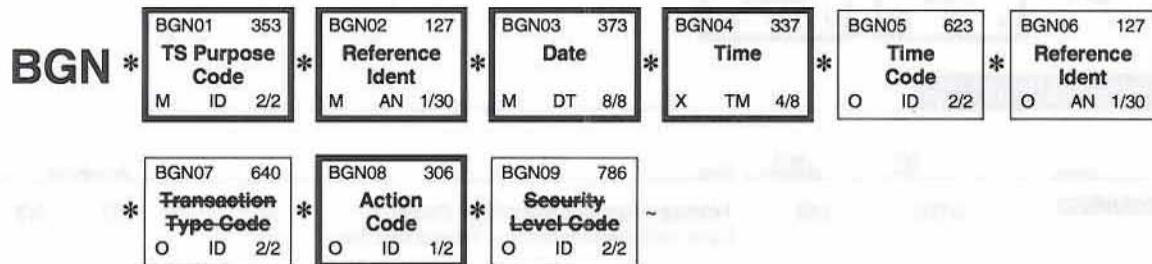

Max Use: 1

Purpose: To indicate the beginning of a transaction set

Syntax: 1. C0504

If BGN05 is present, then BGN04 is required.

## DIAGRAM

## ELEMENT SUMMARY

USAGE	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REQUIRED	BGN01	353	Transaction Set Purpose Code Code identifying purpose of transaction set	M ID 2/2
If the original transaction has already been processed, an incoming transaction using this code may be rejected by the receiver. The rejection will be identified to the sender by telephone or other direct contact.				
			CODE	DEFINITION
			00	Original The "00" indicates the first time the transaction is sent.

		15	Re-Submission			
			Send the "15" when the original transmission was incorrect, has yet to be processed by the receiver, and a new corrected transmission is being sent. This transmission can then be pended by the receiver's translator for further review.			
		22	Information Copy			
			Send the "22" when the original transmission was lost or not processed, and the sender is passing another transmission that is the same as the original.			
REQUIRED	BGN02	127	Reference Identification	M	AN	1/30
			Reference information as defined for a particular Transaction Set or as specified by the Reference Identification Qualifier			
			INDUSTRY: <i>Transaction Set Identifier Code</i>			
			SEMANTIC: BGN02 is the transaction set reference number.			
			Use the transaction set reference number assigned by the sender's application to uniquely identify this occurrence of the transaction for future reference.			
REQUIRED	BGN03	373	Date	M	DT	8/8
			Date expressed as CCYYMMDD			
			INDUSTRY: <i>Transaction Set Creation Date</i>			
			SEMANTIC: BGN03 is the transaction set date.			
			Use this date to identify the date that the submitter created the file.			
REQUIRED	BGN04	337	Time	X	TM	4/8
			Time expressed in 24-hour clock time as follows: HHMM, or HHMMSS, or HHMMSSD, or HHMMSSDD, where H = hours (00-23), M = minutes (00-59), S = integer seconds (00-59) and DD = decimal seconds; decimal seconds are expressed as follows: D = tenths (0-9) and DD = hundredths (00-99)			
			INDUSTRY: <i>Transaction Set Creation Time</i>			
			SYNTAX: C0504			
			SEMANTIC: BGN04 is the transaction set time.			
			Use the time to identify the time of day that the submitter created the file. This element is used as a time stamp to uniquely identify the transmission.			
SITUATIONAL	BGN05	623	Time Code	O	ID	2/2
			Code identifying the time. In accordance with International Standards Organization standard 8601, time can be specified by a + or - and an indication in hours in relation to Universal Time Coordinate (UTC) time; since + is a restricted character, + and - are substituted by P and M in the codes that follow			
			INDUSTRY: <i>Time Zone Code</i>			
			SYNTAX: C0504			
			SEMANTIC: BGN05 is the transaction set time qualifier.			
			CODE SOURCE 94: International Organization for Standardization (Date and Time)			
			Use the time code if the sender and receiver are not in the same time zone.

			CODE	DEFINITION	
			2	<b>Change (Update)</b> Used to identify a transaction of additions, terminations and changes to the current enrollment.	
			4	<b>Verify</b> Used to identify a full enrollment transaction to verify that the sponsor's and payer's systems are synchronized.	
NOT USED	BGN09	786	<b>Security Level Code</b> O ID 2/2		

IMPLEMENTATION

## TRANSACTION SET POLICY NUMBER

Usage: SITUATIONAL

Repeat: 1

- Notes:
1. This segment can be used if a unique ID Number for a group applies to the entire transaction set.
  2. The definition of the Master Policy Number is determined by the issuer of the policy, the Payer/Plan Administrator. The Master Policy Number may be used to meet various business needs such as indicating the line of business under which the policy is defined.
  3. This segment is REQUIRED when the contract or trading partner agreement identify a Master Policy Number for use with electronic enrollment.

Example: REF\*38\*123456~

STANDARD

SITUATIONAL

INS08

584

Employment Status Code

Code showing the general employment status of an employee/claimant

Required for subscriber.

If this insurance enrollment is through a non employment based program such as Medicare or Medicaid then this data element will contain the status of the subscriber in that program, rather than their employment status. Codes for non employment based programs will be limited to "FT", Full Time, "PT", Part-Time, and "TE", Terminated.

CODE	DEFINITION
AO	Active Military - Overseas
AU	Active Military - USA
FT	Full-time Full time active employee
L1	Leave of Absence
PT	Part-time Part time Active Employee
RT	Retired
TE	Terminated

SITUATIONAL

INS09

1220

Student Status Code

Code indicating the student status of the patient if 19 years of age or older, not handicapped and not the insured

Only use the Student Status Code when describing a non-spouse dependent whose age requires a qualifying condition for enrollment (e.g., being an active student). See the Plan contract for details of the age requirements for student status usage.

CODE	DEFINITION
F	Full-time
N	Not a Student
P	Part-time

SITUATIONAL

INS10

1073

Yes/No Condition or Response Code

Code indicating a Yes or No condition or response

INDUSTRY: *Handicap Indicator*

SEMANTIC: INS10 is the handicapped status indicator. A "Y" value indicates an individual is handicapped; an "N" value indicates an individual is not handicapped.

This element is REQUIRED if the member is handicapped or to correct previous report of handicapped status.

CODE	DEFINITION
N	No
Y	Yes

SITUATIONAL	INS11	1250	<b>Date Time Period Format Qualifier</b> Code indicating the date format, time format, or date and time format SYNTAX: P1112 Send when required by X12 syntax.	X	ID	2/3				
			<table><tr><th>CODE</th><th>DEFINITION</th></tr><tr><td>D8</td><td>Date Expressed in Format CCYYMMDD</td></tr></table>	CODE	DEFINITION	D8	Date Expressed in Format CCYYMMDD

D8	Date Expressed in Format CCYYMMDD									
SITUATIONAL	INS12	1251	<b>Date Time Period</b> Expression of a date, a time, or range of dates, times or dates and times <i>INDUSTRY: Insured Individual Death Date</i> SYNTAX: P1112 SEMANTIC: INS12 is the date of death. Use this date for the date of death of the subscriber/dependent. Use this date for the date of death of the subscriber/dependent. This does not replace the use of the termination date within the 2300 loop.	X	AN	1/35				
NOT USED	INS13	1165	<b>Confidentiality Code</b>	O	ID	1/1				
NOT USED	INS14	19	<b>City Name</b>	O	AN	2/30				
NOT USED	INS15	156	<b>State or Province Code</b>	O	ID	2/2				
NOT USED	INS16	26	<b>Country Code</b>	O	ID	2/3				
SITUATIONAL	INS17	1470	<b>Number</b> A generic number <i>INDUSTRY: Birth Sequence Number</i> SEMANTIC: INS17 is the number assigned to each family member born with the same birth date. This number identifies birth sequence for multiple births allowing proper tracking and response of benefits for each dependent (i.e., twins, triplets, etc.). Required if reporting family members with the same birth date, when needed for proper reporting, tracking or response to benefits.	O	N0	1/9				

IMPLEMENTATION

## SUBSCRIBER NUMBER

Loop: 2000 — MEMBER LEVEL DETAIL

Usage: REQUIRED

Repeat: 1

- Notes:
1. If the subscriber's/dependent's Social Security Number is known, it should be passed in the NM108 segment (position 2-030).
  2. This segment must contain a unique SUBSCRIBER identification number (SSN or other). This occurrence is identified by the 0F qualifier (REF01). This identifier is used for linking the subscriber with dependents as required under many policies.
  3. The developers recommend using the identifier developed under the HIPAA legislation, when that becomes available.

Example: REF\*0F\*920399398~

STANDARD

## REF Reference Identification

Level: Detail

Position: 020

Loop: 2000

Requirement: Mandatory

Max Use: >1

Purpose: To specify identifying information

Set Notes: 1. The REF segment is required to link the dependent(s) to the subscriber.

Syntax: 1. R0203  
At least one of REF02 or REF03 is required.

DIAGRAM

IMPLEMENTATION

## MEMBER COMMUNICATIONS NUMBERS

Loop: 2100A — MEMBER NAME

Usage: SITUATIONAL

Repeat: 1

- Notes:
1. This segment is used when contact information is provided to the sponsor about the member. The contact information should be sent to the payer when enrolling subscribers, when enrolling dependents and the dependent's contact number is different than the subscriber's contact, and when changing a member's contact information.
  2. When the communication number represents a telephone number in the United States and other countries using the North American Dialing Plan (for voice, data, fax, etc.), the communication number should always include the area code and phone number using the format AAABBBCCCC. Where AAA is the area code, BBB is the telephone number prefix, and CCCC is the telephone number (e.g. (534)224-2525 would be represented as 5342242525). The extension, when applicable, should be included in the communication number immediately after the telephone number.
  3. By definition of the standard, if PER03 is used, PER04 is required.

Example: PER\*IP\*\*HP\*8015554321~

STANDARD

## PER Administrative Communications Contact

## MEMBER EMPLOYER COMMUNICATIONS NUMBERS

Loop: 2100D — MEMBER EMPLOYER

Usage: SITUATIONAL

Repeat: 1

- Notes:
1. This segment is used when the employer is applicable and the employer communication number is provided to the sponsor about the member.
  2. When the communication number represents a telephone number in the United States and other countries using the North American Dialing Plan (for voice, data, fax, etc.), the communication number should always include the area code and phone number using the format AAABBBCCCC. Where AAA is the area code, BBB is the telephone number prefix, and CCCC is the telephone number (e.g. (534)224-2525 would be represented as 5342242525). The extension, when applicable, should be included in the communication number immediately after the telephone number.
  3. By definition of the standard, if PER03 is used, PER04 is required.

Example: PER\*SK\*\*EP\*8001234567~

STANDARD

IMPLEMENTATION

## MEMBER EMPLOYER STREET ADDRESS

Loop: 2100D — MEMBER EMPLOYER

Usage: SITUATIONAL

Repeat: 1

Notes: 1. This segment is used when the employer is applicable and the employer address is provided to the sponsor by the subscriber.

Example: N3\*50 ORCHARD STREET~

STANDARD

### N3 Address Information

Level: Detail

Position: 050

Loop: 2100

Requirement: Optional

Max Use: 1

Purpose: To specify the location of the named party

DIAGRAM

ELEMENT SUMMARY

USAGE	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES		
REQUIRED	N301	166	Address Information Address information	M	AN	1/55
			INDUSTRY: Insured Employer Address Line			
SITUATIONAL	N302	166	Address Information Address information	O	AN	1/55
			INDUSTRY: Insured Employer Address Line			
			Required if a second address line exists.			

## IMPLEMENTATION

## MEMBER EMPLOYER CITY, STATE, ZIP

Loop: 2100D — MEMBER EMPLOYER

Usage: SITUATIONAL

Repeat: 1

Notes: 1. This segment is used when the employer is applicable and the employer address is provided to the sponsor by the subscriber.

Example: N4\*ROCK HILL\*FL\*33131~

## STANDARD

## N4 Geographic Location

Level: Detail

Position: 060

Loop: 2100

Requirement: Optional

Max Use: 1

Purpose: To specify the geographic place of the named party

Syntax: 1. C0605  
If N406 is present, then N405 is required.

## DIAGRAM

## ELEMENT SUMMARY

USAGE	REF. DES.	DATA ELEMENT	NAME	ATTRIBUTES
REQUIRED	N401	19	City Name Free-form text for city name  <i>INDUSTRY: Insured Employer City Name</i>  COMMENT: A combination of either N401 through N404, or N405 and N406 may be adequate to specify a location.	O AN 2/30

NOT USED	NM111	98	Entity Identifier Code	O	ID	2/3

IMPLEMENTATION

## MEMBER SCHOOL COMMUNICATIONS NUMBERS

**Loop:** 2100E — MEMBER SCHOOL

**Usage:** SITUATIONAL

**Repeat:** 1

- Notes:**
1. This segment is used when the school is applicable and the school number is provided to the sponsor by the subscriber.
  2. When the communication number represents a telephone number in the United States and other countries using the North American Dialing Plan (for voice, data, fax, etc.), the communication number should always include the area code and phone number using the format AAABBBCCCC. Where AAA is the area code, BBB is the telephone number prefix, and CCCC is the telephone number (e.g. (534)224-2525 would be represented as 5342242525). The extension, when applicable, should be included in the communication number immediately after the telephone number.
  3. By definition of the standard, if PER03 is used, PER04 is required.

**Example:** PER\*SK\*\*TE\*8001234567~

STANDARD

### PER Administrative Communications Contact

**Level:** Detail

**Position:** 040

**Loop:** 2100

**Requirement:** Optional

**Max Use:** 1

**Purpose:** To identify a person or office to whom administrative communications should be directed

- Syntax:**
1. **P0304**  
If either PER03 or PER04 is present, then the other is required.
  2. **P0506**  
If either PER05 or PER06 is present, then the other is required.
  3. **P0708**  
If either PER07 or PER08 is present, then the other is required.
